# HANDLING A SPILL - USER INFORMATION

## MOVE AWAY. GET HELP

Evacuate the area and notify others working nearby. Get help.

## MAKE THE AREA SAFE

Restrict access: seal off area by means of barrier tape or notice.

## LOOK FOR INJURIES

Check yourself and those working nearby for any type of injury.

## IDENTIFY THE HAZARD

Try to identify the spillage. It may help you to deal with the spill more effectively.

## OBTAIN THE SPILL KIT

This should be nearby and its location known to relevant personnel.

## SUIT UP

Don appropriate personal protective clothing to deal with the spill, double-check its effectiveness.

## PREVENT POLLUTION

Cover any drains. If possible cut off the source of the spill, eg. isolate a valve, upright a leaking drum etc.

## CONTAIN THE SPILL

Encircle the spill with socks/booms and if possible attempt to reduce the area of the spill. These items will also start to absorb the spilled liquid.

## ABSORB THE SPILL

Place pads and cushions in the centre of the spill to absorb the pooled liquid.

## DISPOSAL

Place used absorbents in disposal bags, seal in a container and mark with contents. Dispose of in accordance with local regulations.

## REPORT

Report the incident to supervisor/foreman/manager.

## REFILL THE SPILL KIT

Replenish the Spill Kit with the necessary items and make sure it is ready for use.
